D-UE

D-UE[21]

[21] LLM uncertainty quantification through directional entailment graph and claim level response augmentation, arxiv 2024

D-UE[21]

- **Task Type:** Open-ended generation

- **Introduction:** D-UE constructs a directed entailment graph over sampled responses, augmenting each answer with claim-level expansions and applying a Random Walk Laplacian to derive an eigenvalue-based uncertainty score. It quantifies decoding uncertainty and provides a structured black-box evaluation method that incorporates directional entailment and semantic inconsistency.

Type	Uncertainty Sources	Model Accessibility	Training Necessity	Consumption	Evaluation
Consensus-based	Decoding	Black-box	Post-hoc	Medium	Ranking
